(((100% WIRELESS

ASTERA IS 100% WIRELESS

More than 10 years ago we realized that transporting truckloads of cables to and from events as well as laying them out and packing them is a messy and time-consuming job. So we developed a wireless lighting system to make your event setup faster and easier to manage.

We did this by integrating rechargeable batteries in our lights and by developing a powerful remote control system. This system not only helps you to save time and enable clean setups but also allows you to become more creative by quickly moving lights around and to places without electricity.

Our lights are designed to be flexible and work for a range of usages. Spotlights can be used to wash walls, lights can be used indoors and outdoors and work wirelessly as well as when hard wired for bigger or longer events.

Advanced battery technology and control lets you set the battery runtime to up to 20h. You can be sure that your Astera fixture won't run out of juice before your production is finished.

We included the most reliable wireless DMX module on the market which works with the leading CRMX and W-DMX standards for the professional and reliable operation.

AsteraApp™ offers intuitive and fast control of complex lighting setups and is also used to change DMX settings of the lights as well as monitor them out of a distance.

All Astera fixtures come in IP65 waterproof housings to make sure you can use them outdoors without worries.

The Astera System

Set up lights

Set up your lights conveniently out of a distance. Adjust DMX settings on one or several lights. After your job, do a master reset.

Monitor lights

Check your lights while operating them. View battery status settings, which lights are targeted and get informed if a light is being moved.

Control lights

Send effects and colors to your lights. Choose which lights you want to target. Save programs for quick launch later.

Wireless DMX

The ART7 works as a wireless DMX transmitter with LumenRadio CRMX Technology, just connect it with the included XLR adapter

Compatible

Astera lights can be controlled together by CRMX and W-DMX (up to G4S) so you can use them together with other wireless lights

What makes our lights the number one choice?

Talkback+

Detect all available lights, set them up, check their status, configure DMX addresses and DMX profiles.

Seamless Runtime

Set the length of your production and be sure that your lights won't run out while still getting the maximum brightness.

TruColor Calibration

Individually calibrated lights lead to 100% color consistency and exact color reproduction of color temperature and filter gels.

Effects

Quickly build programs out of colors and effects, trigger them or make them match a beat.

Flicker Free

Scrambled PWM technology to avoid flickering when filming.

Green/Magenta correction

Adjust green/magenta during content creation to reduce post-production work.

Scheduled Stand-by

Switch lights into power-saving standby and schedule them to wake up when the production starts.

Dynamic Power-boost

This exclusive feature makes the light able to display the maximum brightness at all time and intensify non-white colors.

Emergency Lights

Switches to white light when AC power is cut out to keep your event safe.

Anti-theft

The lights give visual and audible alarm and send notification to the AsteraApp if they are being moved during an event.

DJ Feature

Auto-BPM analyzes the beat and matches programs to it, flash buttons can trigger special effects while held down.

Other features

The AsteraApp™ is packed with many additional items and new features are frequently added via software update.

TITAN TUBE

PIXEL TUBE

Titan Tube & Helios were specially designed for the Film, Broadcasting and Cinema industries. They are optimized for ultra-high TLCI, very high CRI and peak brightness. Colors as well as Hue, Saturation and Intensity can be set directly on the tube. In addition, they accept wired DMX via a special power/data combination cable.

AX1 PixelTube is an affordable yet very powerful LED tube for event and entertainment lighting. It can be used as a background on stages and around event sites and it can be used to create stunning lighting effects. A highly creative device that offers an infinite range of possibilities.

AsteraApp

The **AsteraApp** is the result of 10 years of development and specifically designed for temporary event setups.

It is a huge time saver when setting up, monitoring or controlling lights.

Talkback+

AsteraApp features a revolutionary bi-directional wireless communication. Get a list of all your lights and their status, even when controlling them by DMX. Keep a permanent overview by filtering and sorting the list.

Prepare lights

Change your light's DMX addresses, presets, etc. without touching the lights. Select multiple lights and change their settings together to save even more time.

Programs

Create complex programs out of colors, effects and settings. The lights will remember and repeat these effects without requiring a constant link

Targets

Quickly create groups of lights, assign positions and select which lights should receive commands

For a complete list of features, go to www.astera-led.com/app/

ART7 AsteraBox™ CRMX

The **ART7** is the interface between lights and controller. We added a CRMX transmitter to the ART7. Just plug-it to your DMX console and control your X-series lights and other lights with CRMX technology.

The **ART7** can transmit up to 512 DMX channels with the fastest refresh rate. Of course the new AsteraBox still works as an interface between tablet and lights. Its built-in battery enables easy and time-saving set-up, just like all our products.
